

## HIGHLIGHTS

- Rapid grain drydown
- Industry leading plant health
- Extended stay green for added yield
- Superior agronomics
- Moderate response to population
- Excellent dual purpose option
- Yield leader

## AGRONOMY NOTES

Hybrid starts the season with very good seedling vigour. Seedlings are darker green with more upright leaf habit vs MZ 1633DBR. Flowering date will be similar to other hybrids in this maturity. Plant height is tall with modest ear height. Shanks are longer holding a girthy ear. Grain sets a bit later for maturity with accelerated drydown. Maturity leading Goss's Wilt and NCLB tolerance. Position in and south of maturity zone at moderate populations (32-36K).

**CHU:** 2300 **RM:** 76
